Our Lowestoft Drifter design was specially developed as a step up in size and performance from the Bristol Pilot Cutter. She features a fully insulated steel construction, traditional rig, ergonomic deck layout, and interior arrangement, all of which conspire beautifully to create a tremendous high volume cruiser for both hot and cold climates. With the diesel or optional electric propulsion carefully positioned under the cabin sole, there is limitless potential to vary the interior layout to your own requirements. The yacht has 2m (6ft 6in) headroom throughout, and makes an ideal family or charter yacht for those wanting a home from home - or even just a home!
